Security Clearance: TS/SCI with CI Polygraph

PROFESSIONAL SUMMARY

Cybersecurity Integration Specialist and U.S. Marine Corps Cyber Warfare Operator veteran with 4+ years in defensive cyber operations, SIEM detection engineering, digital forensics, and incident response for a DoD Cybersecurity Service Provider (CSSP). Primary technical interface to the client for requirements and delivery. Author of SOPs and policy that align analyst operations with DoD and NIST standards and strengthen audit posture. Reduced daily false-positive alerts by 67% through 30+ approved SIEM rule changes. Holds GCFA, GCFE, GCIH, GPYC, and GSEC. Pursuing a B.S. in Applied Cybersecurity (SANS Technology Institute). Active TS/SCI with CI Polygraph.

TECHNICAL SKILLS

SIEM & Detection: Microsoft Sentinel, Splunk, Security Onion, KQL, Sysmon, detection rule tuning, alert baselining

Forensics & IR: Autopsy, FTK, Wireshark, memory and disk forensics, malware analysis, threat hunting, incident response

Infrastructure: Palo Alto Firewalls, Microsoft Deployment Toolkit, virtualization, Linux (Red Hat, Ubuntu), Windows Server and Enterprise

Governance: SOP and policy development, Change Control Board (CCB) submissions, audit readiness, STIGs, NIST SP 800-53, DoD CSSP requirements, MITRE ATT&CK

Professional: Client requirements management, technical documentation, analyst training, cross-functional collaboration, high-stress decision making

PROFESSIONAL EXPERIENCE

Peraton - Defense Finance and Accounting Service CSSP, Indianapolis, IN 07/2025 – Present

Integration Specialist, CSSP Analyst Team 06/2026 – Present

- Serve as technical lead and primary client interface for the CSSP Analyst Team. Translate client requirements and requests into correct, on-time deliverables.
- Develop and refine SOPs and policy that guide analyst operations, comply with DoD and NIST regulatory frameworks, and expand the CSSP mission set and capabilities.
- Proposed 30+ SIEM detection rule changes to the Change Control Board (CCB). Reduced daily false-positive alerts from approximately 300 to fewer than 100 (67% reduction).
- Identified critical visibility gaps. Built collection and reporting systems for telemetry previously assumed unavailable, which reduced the network attack surface.
- Created auditable reporting where none existed and improved existing audit artifacts, which strengthened the CSSP team's posture under external review.
- Train analysts and author documentation for mission-critical toolsets. Refine SIEM rules to maintain visibility of current threats.

Shift Lead, CSSP Analyst Team 02/2026 – 06/2026

- Led shift analysts in triage, escalation, and incident response across the DFAS enterprise network. Ensured audit requirements were met on each shift.
- Investigated a Windows Error Reporting–based LSASS credential-access pattern. Reproduced the technique, established host baselines, and delivered a Sysmon detection signature and SIEM hunt playbook.
- Developed automated toolsets and SOPs that standardized shift handover, alert triage, and evidence handling.

- Performed digital forensics on endpoints in response to alerts and in support of formal investigations.

Cybersecurity Analyst, CSSP Analyst Team 07/2025 – 02/2026

- Identified suspicious network traffic patterns in Microsoft Sentinel that initiated formal security incident investigations.
- Processed and analyzed 30,000+ security alerts and established baseline network behavior patterns.
- Collected and analyzed digital artifacts to support threat hunting and incident response.
- Created SIEM rules to close detection gaps and identified infrastructure weaknesses that improved security posture.

United States Marine Corps — Defensive Cyber Operations, Okinawa, JP 02/2022 – 05/2025
Cyber Security Analyst / Infrastructure Architect

- Conducted advanced threat hunting in Splunk and Security Onion. Developed custom dashboards and queries that identified anomalous traffic across 3.5M+ daily packets.
- Led digital forensic investigations with Autopsy and FTK. Produced reports on malware behavior, registry artifacts, and file system anomalies.
- Architected and maintained virtual infrastructure for 100+ users. Ensured high availability of mission-critical tools.
- Enforced STIG compliance across legacy and modernized classified systems, which improved cybersecurity resilience.
- Led and instructed 75 Marines during the Joint Cyber Analysis Course.

CERTIFICATIONS

- GIAC Certified Forensic Analyst (GCFA) – 07/2026
- GIAC Certified Forensic Examiner (GCFE) – 04/2026
- GIAC Python Coder (GPYC) – 02/2026
- GIAC Certified Incident Handler (GCIH) – 09/2025
- GIAC Security Essentials (GSEC) – 07/2025
- GIAC Foundational Cybersecurity Technologies (GFACT) – 03/2025
- CompTIA PenTest+ – 08/2024
- Red Team Certified Professional, Marine Corps Cyberspace Operations Group – 04/2024

EDUCATION & TRAINING

- SANS Technology Institute – B.S. in Applied Cybersecurity (BACS), expected 01/2027
- Alvin Community College – A.A. in General Studies, 05/2020
- USMC Cyber Operators Specialist Course – 10/2023
- Joint Cyber Analysis Course (NSA certified) – 05/2023

AWARDS & RECOGNITION

- **National Cyber League, Diamond 1 Medal (11/2025)** – Scored in the 97th percentile overall in the Fall 2025 Individual Game.
- **Navy and Marine Corps Achievement Medal (11/2024)** – Analyzed 3.5M+ daily packets across critical networks and led defensive cyberspace operations in Okinawa, JP.
- **Meritorious Mast (05/2023)** – Exemplary leadership of 75 Marines during the Joint Cyber Analysis Course.
